Said by 1 of 5: Grok

Recent public activity, as AI sees it

- "Same AI Bot, Same Question, Three Sessions: Who Leads This Organisation?" (AI Business, September 18, 2026)
Said by 4 of 5: OpenAI, Gemini, Grok, Perplexity
- "Ask an AI Who Can Help With AI Governance. Then Look for Your Own Name." (AI Business, September 9, 2026)
Said by 2 of 5: OpenAI, Grok
- "Two Companies, One Agent, One Error" (AI Business, September 4, 2026)
Said by 2 of 5: OpenAI, Grok
- LinkedIn post about MelMat platform using multiple AI models (LinkedIn, August 18, 2026)
Said by 2 of 5: OpenAI, Perplexity
- LinkedIn posts on AI autonomy levels and AI agent methodology (LinkedIn, July and June 2026)
Said by 1 of 5: Perplexity

The assistants see recent public activity from Sergei Ponomarev, with the most recent dated publication on September 18, 2026.

3. Are there red flags about working with Sergei Ponomarev?

Identity ambiguous: no reputation conclusion

Other people share this name, or not every answer could be tied to this profile. This scan draws no conclusion about the person's reputation.

The search covered disputes, complaints, reviews and warnings; no result was attributed to the profile given.

Reviews and public feedback

No model found a review, a testimonial or a recommendation, good or bad. A person checking has nothing to go on but the profile itself.

What they added

- No independent third-party reviews or client testimonials were found
- Limited independent reputation data beyond his own site and LinkedIn presence
- Standard professional due diligence is recommended

4. Unconfirmed claims: roles only one model names

- Grok: Founder at Mylo.family (AI-powered legacy planning platform)
- OpenAI: Former Executive Assistant and Project Manager at Impact Investing Solutions (Switzerland)
- OpenAI: Former Impact Analyst and Evaluator at YouSocial (Moscow)
- Grok: Former Associate Professor at Perm State University

The other models describe the person without these. Each is unconfirmed: it may be out of date, a past one told as current, or not about this person at all.

5. Other people with this name

One other person with this name appeared in the answers. Their pages, records and contacts are not listed: this report is only about the profile given. Anyone who asks an AI assistant about Sergei Ponomarev can be shown them too. What keeps namesakes apart is context: the same city, employer and field next to the name on every public page.

6. Recommendations: what to strengthen

Each point closes a gap visible in the answers above. None of them guarantees that a model changes its answer: they give the models something correct to read.

1. Publish independent client testimonials or case studies

No independent third-party reviews or client feedback were found in the answers

- Request past clients to provide LinkedIn recommendations or testimonials.
- Publish selected client case studies on the AI Business website.
- Share these testimonials and case studies on LinkedIn and other professional networks.

2. Consolidate and update public professional profiles

Some assistants noted multiple profiles or incomplete information about current roles and projects

- Use a consistent headline and summary across LinkedIn and AI Business site, including role, location, and key projects.
- Close or merge any duplicate LinkedIn profiles to avoid confusion.

3. Clarify and highlight distinction from other individuals named Sergei Ponomarev

Search results include other people with the same or similar name who have unrelated controversies

- Add a clear professional tagline on LinkedIn and AI Business site, e.g., 'Sergei Ponomarev, AI Business Founder, Bulgaria'.
- Publish a brief bio emphasizing unique background and current focus to differentiate from namesakes.
- Monitor search results and correct mistaken identity where possible.

7. How AI learns about a person

- AI assistants with web search read what is public and readable without a login. Most of a LinkedIn, Instagram or Facebook profile is not. Public posts, articles, talks, interviews and mentions on other sites are.
- They look for the same facts in more than one place. A role stated only on a personal profile is a claim; the same role on a company page, an event page and an article is a fact to them.
- They prefer dated, recent pages. A profile with no public activity in a year reads as a person who may have moved on.
- A name shared with other people is resolved by context: city, employer, field. The more pages put a name next to those three, the less often that person is mixed up with someone else.
- One role, written the same way everywhere. Three different job titles on three networks become three different versions of one person.
- A public way to be reached. If no public page shows how to contact a person, the honest answer to 'how do I get in touch' is 'I could not find a way'.
